Which LLM is Right for You?

There are so many Large Language Models (LLMs) out there that many of my friends are confused about which one is the best. So I decided to make this note for them.

AI REVIEW PASSED.

Pi.AI – a very nice interface and FREE

Pi.ai is a personal AI developed by Inflection AI, designed to provide both factual information and emotional support. It is a conversational AI that engages in meaningful conversations with users, offering advice, information, and a listening ear. Pi prioritizes being kind, supportive, curious, humble, creative, fun, knowledgeable, and personalized in its interactions. Users can talk to Pi about a wide range of topics, seek advice on various aspects of life, and engage in conversations on anything from general knowledge to personal matters.

Pi is available across multiple platforms like Instagram, Facebook Messenger, WhatsApp, SMS, online, and mobile devices (iPhone or iPad), with an Android version coming soon. It aims to democratize access to intelligence and provide personalized assistance to users worldwide. Safety measures are in place to prevent harmful behaviors and protect user data. Pi is free to use and aims to revolutionize personal intelligence by combining information with emotional support in a compassionate and understanding manner

Claude 3 by Anthropic

Claude 3 is a family of state-of-the-art AI models developed by Anthropic, designed to excel in various cognitive tasks with a focus on intelligence, speed, and cost efficiency. The Claude 3 family includes three models:

- Claude 3 Haiku,
- Claude 3 Sonnet
- Claude 3 Opus

Each model offers different levels of performance, allowing users to choose the optimal balance for their specific needs. Claude 3 Opus is the most intelligent model, excelling in highly complex tasks with near-human levels of comprehension and fluency. It navigates open-ended prompts and sight-unseen scenarios with remarkable understanding. Claude 3 Sonnet strikes a balance between intelligence and speed, ideal for enterprise workloads, offering maximum utility and reliability for scaled AI deployments. Claude 3 Haiku is the fastest and most compact model, providing near-instant responsiveness for simple queries and requests.

These models support multiple languages like English, Spanish, Japanese, and others, enabling tasks such as task automation, interactive coding, research review, content creation, code generation, translations, sentiment analysis, and more. The Claude 3 models are known for their advanced capabilities in analysis, forecasting, nuanced content creation, code generation, and conversing in various languages.

They exhibit reduced biases compared to previous models and are designed to follow complex instructions accurately while producing structured outputs like JSON. Additionally, the models have improved safety features to reduce biases and promote neutrality in their responses.Claude 3 represents a significant advancement in AI technology by offering enhanced performance across a wide range of tasks while prioritizing safety, reliability, and user-friendly interactions

Claude's constitutional AI architecture consists of three models: Sonnet for speed, Opus for intelligence, and the original Claude design for versatility. Users can choose the model that best suits their needs, whether they prioritize speed, intelligence, or a balance of both.
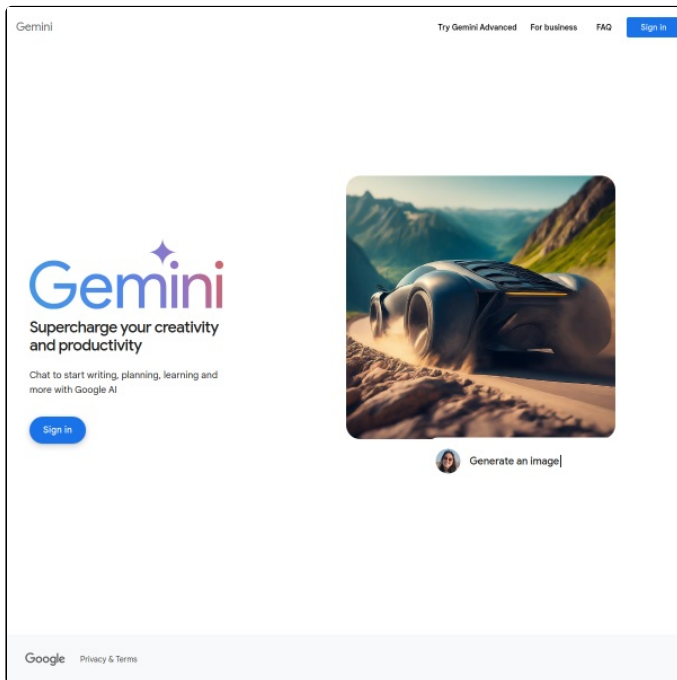

Built by Anthropic in San Francisco, California, U.S.

Gemini Advanced

Gemini Advanced is a cutting-edge AI technology developed by Gemini, designed to revolutionize data analysis and decision-making processes. This advanced AI system leverages machine learning algorithms, natural language processing, and predictive analytics to provide actionable insights from complex datasets. Gemini Advanced offers businesses and organizations the ability to extract valuable information, identify patterns, predict trends, and make informed decisions based on data-driven intelligence.

With its sophisticated capabilities, Gemini Advanced empowers users to optimize operations, enhance strategic planning, and drive innovation through data-driven solutions. This AI technology is at the forefront of transforming how businesses harness the power of data to gain a competitive edge in today's rapidly evolving digital landscape.

ChatGPT

ChatGPT is an advanced conversational AI model developed by OpenAI, known for its natural language processing capabilities and engaging dialogue generation. It is based on the GPT-3 architecture and excels in generating human-like responses to a wide range of prompts and questions.

ChatGPT is widely used in chatbots, customer service applications, language understanding tasks, and more, offering users a seamless and interactive conversational experience. Its ability to understand context, generate coherent responses, and adapt to various conversational styles makes ChatGPT a versatile tool for enhancing communication and user engagement in diverse applications.

Perplexity.ai – a Google Replacement!

Perplexity.ai is a conversational search engine developed by Inflection AI, offering natural language processing-based responses to user queries. It utilizes sources from the web to provide answers with inline citations. The platform includes a free version with GPT-3.5 and a paid version, Perplexity Pro, featuring advanced models like GPT-4 and Claude 3.Founded by Andy Konwinski, Denis Yarats, Johnny Ho, and Aravind Srinivas, Perplexity has gained popularity and funding from investors like Nvidia and Databricks. The search engine focuses on contextual understanding of queries to deliver personalized results and supports interactive conversations with users.
