## Best AI Tools for Founders

I use many AI tools to manage my startup marketing and research tasks.  
I will share the AI tools I use on a daily basis.

AI REVIEW PASSED.

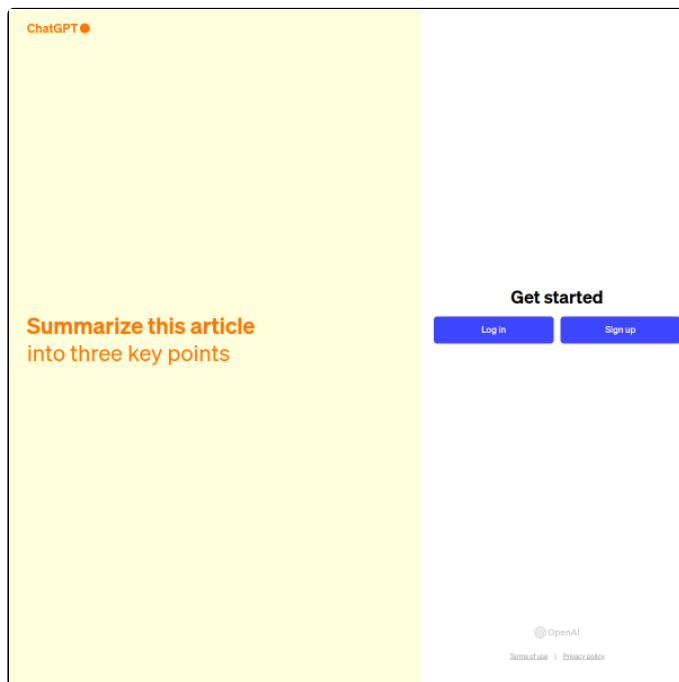

## PI AI – the FREE AI for creative tasks

This is a great AI tool for free! You can generate some really great creative contents using this AI. This Large Language Model (LLM) is good for many general tasks.

## Discover ChatGPT: The World's Premier Language Model

This one is most widely used LLM in the world. However, I mostly use it for code snippets and complex analytical tasks and most often rely on the GPT-4 version. You can also generate images or analyze existing images using this LLM.

PS: I am using the PAID version which cost \$20/mon.

Application error: a client-side exception has occurred (see the browser console for more information).

## Claude 3 - The Constitutional AI

Claude 3 has a huge context window of 200K so it can take large input data. I usually use it for processing large PDF files to summarize or analyze or derive information from large amount of data.
