AI Voice & Video Generators

AI voice and video generators are in high demand. People always ask me about these tools. I only use an AI voice generator for a podcast I started called AI for Mere Mortals. I plan to explore video generators in the future, so here is my compiled list of tools to try out and review.

AI REVIEW PASSED.

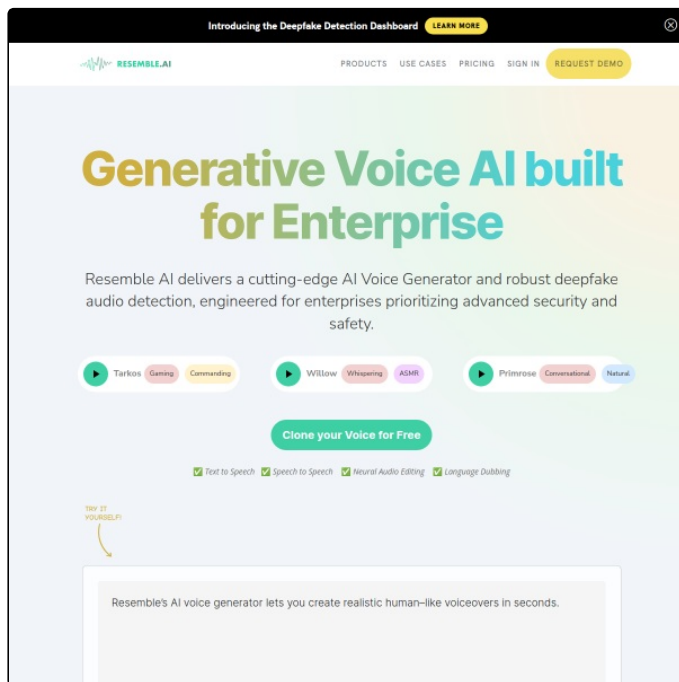

WellSaid - AI Text 2 Speech

I didn't see a whole lot on their site that tells me they are better than others. However, they do have an TTS API which is interesting to me so I will investigate this further in the future.

Resemble.ai – Generative Audio, Deepfake Detection and Audio Fill

I think this one is a really interesting SaaS for AI based audio tools. They have deepfake detection for audio, which is interesting but need to reviewed. Their audio inpainting tech -- inserting words or phrases in the audio stream -- is interesting too.

Voiceflow – Build Chatbot

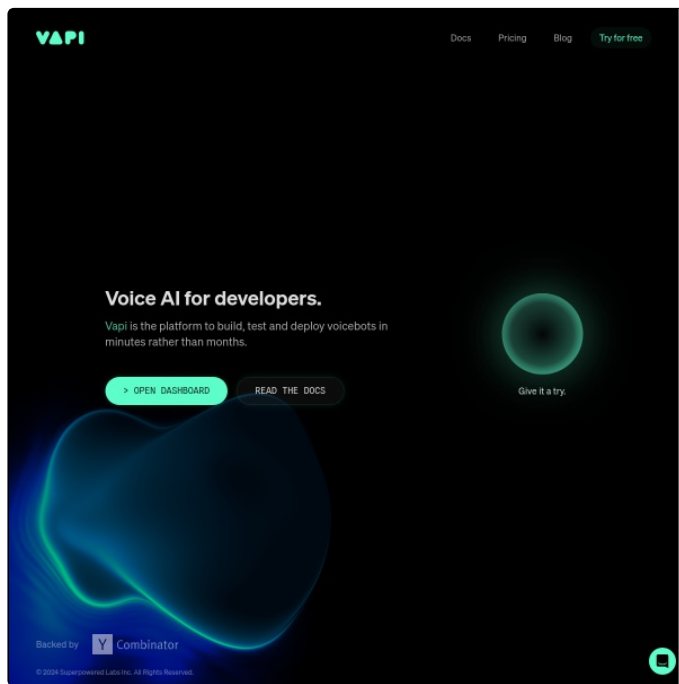

Even though their name says 'voice', they are really a chatbot builder platform and I think this is a very decent one as it can be used with custom API on your backend website and it can integrate with SMS, Whatsapp etc.

I found out about this from Alex "Northstar" Hormozi, who is a great AI spaces host on X (formerly Twitter). Here is his own chatbot that you can explore.

Voice AI for developers

This is actually a voice-based AI platform that can be used by developers to build AI-powered automated voice-enabled agents that can help customers via phone.
