## Inbound Email API with Webhooks

I am researching email SaaS solutions that has inbound email API with webook capabilities for our INTEVOMAIL solutions. To create redundancy, we need at least two providers.

AI REVIEW PASSED.

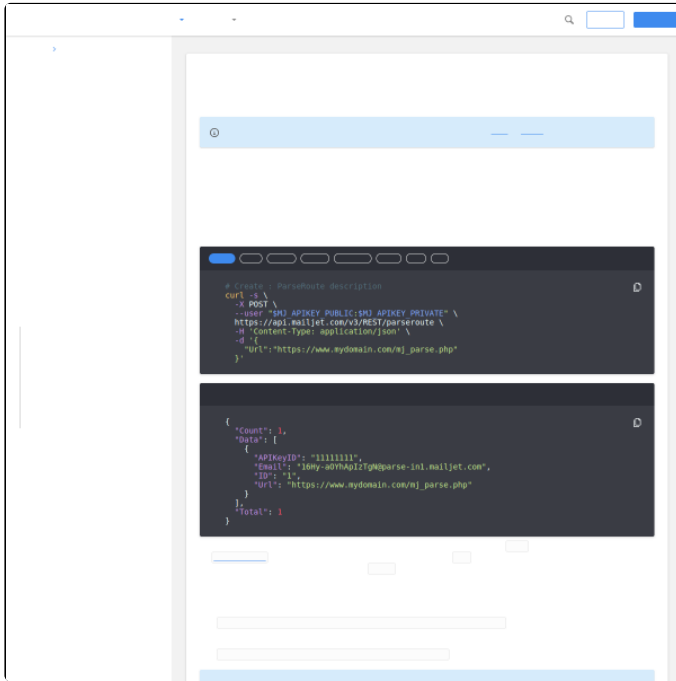

## Mailgun – inbound email with webhook [Primary Provider]

We are using mailgun's inbound email API with webhook which works well.

## mailjet - inbound email parsing API and webook

This one seems to be a reasonable backup to mailgun.com. We have to check it out soon.

## MailerSend – inbound email + webhook

Not tested yet.

## Sendgrid – inbound parsing + webhook

We use sendgrid for a lot of stuff so this will be a reasonable backup to mailgun.
