## Solana Trips and Tricks

Here are some of my tips and tricks that I compiled.

AI AGENTS HAVEN'T YET REVIEWED THIS NOTE!

## Get your own Solana RPC

Getting a custom RPC endpoint for the Solana network offers several benefits. It provides improved reliability, performance, and security compared to public endpoints. Custom endpoints allow for greater customization, privacy, and scalability, enabling you to optimize your infrastructure to suit your application's specific needs. While running a custom endpoint incurs costs, it can be more cost-effective in the long run, especially for applications with high transaction volumes or specific requirements.

You can use custom RPC with many wallets and platforms like Raydium, Orka.

# JUP.ag – Jupiter Swap Tricks for Fast Tracking Your Swaps

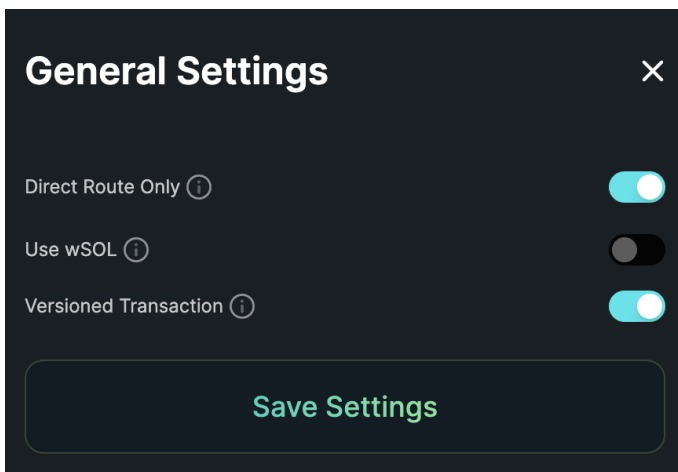

When everything is super hot, you might find it difficult to swap your token in the Solana network. So make sure you are using the right settings on platform like JUP.ag to fast track your transactions. Here are some tricks:

## Step 1: Click on the gear icon for changing Swap settings

## Step 2: Turn on Direct Route Only and Versioned Transactions

These two settings make things go fast.

Save settings and enjoy faster swapping!
