PRO-Sitemaps.com is a professional sitemap service

This service helps website owners create, host, and automatically update XML sitemaps. The platform offers a range of features to optimize and maintain sitemaps, which play a crucial role in search engine optimization (SEO) and website visibility. Some key features of PRO-Sitemaps.com include:

1. Automated sitemap generation and updates: The service creates and keeps sitemaps up-to-date without requiring manual intervention or installing software on the user's computer or server.
2. Broken link detection: PRO-Sitemaps.com identifies broken links on a website and provides details about the issues, helping users maintain a healthy site structure.
3. Sitemap types: The platform supports various types of sitemaps, including images, videos, news sitemaps, and RSS feeds.
4. Site analysis: Users can analyze their site structure, track sitemap history, and find all external links using the service.
5. Notifications: PRO-Sitemaps.com sends alerts when the sitemap is updated, allowing users to track changes on their site.
6. Mobile app: The service offers a free mobile app for iOS and Android devices, enabling users to manage their sitemaps quickly and easily.

Overall, PRO-Sitemaps.com is a valuable tool for website owners looking to streamline their sitemap management process and improve their website's search engine visibility and performance.

Finding the Keywords and Keyword Volume for Free

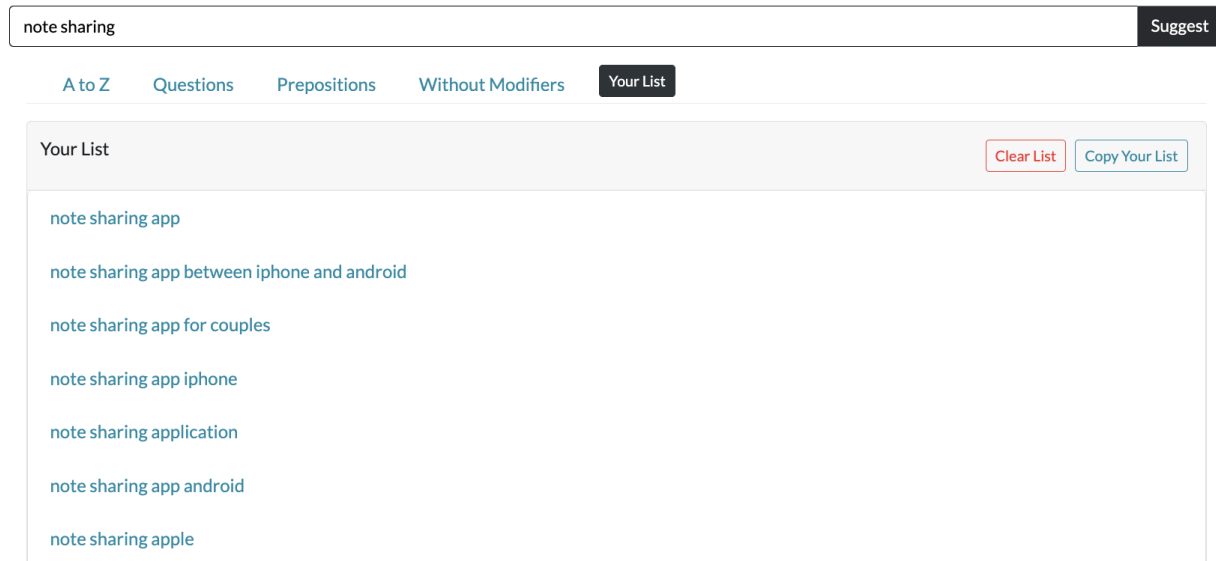

Inspired by [natiakourdadze](#) I have just tried these steps:

Step 1: Get keywords for your web app

Using a free tool called [Termsuggest.com](#) I generated suggested keywords using a single generic phrase "note sharing" for the ShowNotes app as follows:

Get Keyword Ideas for Content Marketing or SEO

Enter a term below and hit "Suggest" to get a list of suggested terms from Google's Query Suggest API.

The screenshot shows the Termsuggest.com interface. At the top, there is a search bar containing the text "note sharing" and a "Suggest" button. Below the search bar, there are several filter tabs: "A to Z", "Questions", "Prepositions", "Without Modifiers", and "Your List". The "Your List" tab is currently selected. Below the filters, there is a section titled "Your List" with two buttons: "Clear List" and "Copy Your List". The list contains the following suggested keywords:

- note sharing app
- note sharing app between iphone and android
- note sharing app for couples
- note sharing app iphone
- note sharing application
- note sharing app android
- note sharing apple

Step 2: Get Search Volume for the Suggested Keywords

Then, I took the list of suggested keywords to [Searchvolume.io](#). To see what keywords in this list of suggested words have reasonable search volume. Here is an example results:

Keywords

[Download CSV](#)

Keyword	Avg. monthly searches	Create AI article
note sharing app	880	Create AI article
best note sharing app	70	Create AI article
note sharing app between iphone and android	40	Create AI article
note sharing app android	40	Create AI article
note sharing instagram	30	Create AI article
note sharing app for couples	20	Create AI article
notes app sharing not working	20	Create AI article
note sharing website	20	Create AI article
note sharing not working	20	Create AI article
note sharing app iphone	10	Create AI article
note sharing application	0	Create AI article

Now, I can clearly see that only a few of the suggested keywords or phrases have any search volume.

Step 3: Optimize website accordingly

Based on this exercise, I think I will go for "note sharing app" as the phrase for optimizing the site as it has a decent amount of search volume.
